UNION LOCK

Our Company

Union-Lock Industrial and Trading Corporation is a premier multi-product, multi-service marketing outfit in the Philippines, which is known for providing top-of-class products and services to a range of industries. It serves as its main markets the cement plant, power plant, and food manufacturing industries.

Established in 1999, Union-Lock Industrial and Trading Corporation is the successful result of years of extensive experience and training by its founders, known experts in the business who have previously made significant contributions to a larger, veteran corporation in the same category. Equipped with broad knowledge, proven skills, and unwavering determination, they have created a thriving business boasting an impressive roster of fully serviced, satisfied clientele.

In partnership with Jung Won Engineering Co., Ltd of South Korea, Union-Lock Industrial and Trading Corporation reach out to industrial plants nationwide to offer a wide range of practical, economical and efficient solutions to operating challenges.

UNION LOCK

JUNGWON ENGINEERING Co., LTD.

Together . . .

To offer quality roller tires and table liners that ensure maximum performance and minimum downtime, As the exclusive distributor of the leading roller manufacturer and supplier – Jung Won of south Korea, we strive to deliver innovative hardface-welded conical rollers, spherical rollers and table liners for cement mills, and power plants, and pre-grinding rollers for clinker mills. Our substantial investment in research and development, along with strong commitment to client feedback, also enables us to offer technological advancements that ensure our clients the highest-quality of our products, our dedication to research, and our ability to satisfy our extraordinary clients.

JUNGWON ENGINEERING CO., LTD.

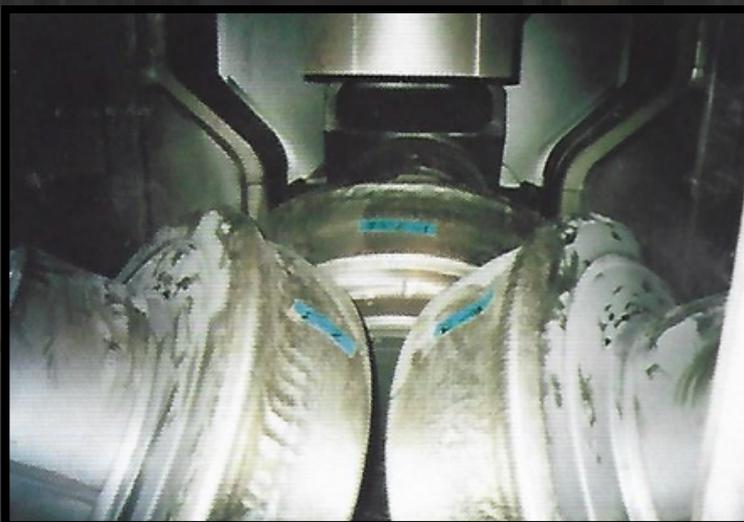

What We Have . . . Our Products

DURABILITY

Jun Won Engineering Co. Ltd guarantee service life of their products. Jun Won Engineering Co. Ltd own unique hardface-welding technique extends the service life of our products one and a half times longer than that of conventional High-Cr cast/forged products.

wear profile of spherical rollers for slag mill after 7,000 hours of use

the hub and the tire giving off max. contact

STABILITY

Provide clients with consistent and stable rollers, by using specially manufactured noble welding alloys and easily machinable ductile and tough core materials that give off maximum contact between the tire and the hub. Careful selection of materials, strict quality control, and innovative techniques result in stable rollers.

We Recycle Also . . .

REPAIRABLE

Easily repair of rollers for re-use by gouging out and recladding defects.

Repairs can be made at least once or twice for cement mill rollers and up to six times for power plant rollers to give off full performance long after their guaranteed service lifetime.

table liner under repair on site

COST EFFECTIVE

Giving clients maximum value for minimum cost. Extended service lifetime, high-performance, reduced overhaul downtime, and handy repairs results in increased productivity at our client's plants.
